INFORME DE INTELIGENCIA Y AUDITORÍA SOC L2

INFORME TÉCNICO DE INCIDENTES

Cliente: SOC L2 Logs Ampliados Multiples Incidentes
Fecha: 27/10/2026

Analista: Motor Automatizado SOC Tier-2 | **Clasificación:** Confidencial / TLP:AMBER | **Total Registros:** 715 analizados

1. DESGLOSE ESTADÍSTICO Y CRITICIDADES

TOTAL	HIGH	MEDIUM	LOW	NORMAL
715	6	102	62	545

2. TAXONOMÍA DE VECTORES DE ATAQUE

Fuerza Bruta (Auth / RDP):	102
Comandos Maliciosos (PowerShell):	6
Inyección SQL / Web Exploit:	0
Phishing / Credencial Access:	0

3. DICTAMEN DE ANÁLISIS FORENSE (OLLAMA)

```
### Informe Ejecutivo: Análisis de Logs Ampliados para Incidentes Críticos

---

#### 1. Resumen ejecutivo
Se detectaron **14 intentos de fuerza bruta (brute force) en acceso RDP** dirigidos a
servidores críticos (principalmente el dominio DC-01) desde la IP externa
`203.0.113.74`. Todos los intentos **fallaron** (no se confirmó compromiso de
sistemas). La actividad se presenta como un ataque activo de alto potencial de
impacto, con severidad **media**. Se requiere acción inmediata para bloquear la IP
externa y reforzar las políticas de autenticación RDP, evitando futuros intentos de
compromiso del dominio.

---

#### 2. Principales amenazas detectadas
| Tipo de amenaza | Evidencia observada |
|-----------------|---------------------|
| **Fuerza bruta en RDP** | 14 intentos fallidos (Event ID 4625) desde IP externa
`203.0.113.74` hacia DC-01 y servidores críticos (FS-SRV01, APP-SRV01). Los usuarios
afectados son cuentas de administración (ej.: `CORP\jlopez`, `CORP\slopez`,
`CORP\backupsvc`). |
```

```
**Justificación**:
- La IP `203.0.113.74` corresponde a un rango reservado para pruebas (RFC 6890), pero en este contexto se identifica como fuente externa de ataques.
- Todos los intentos fallaron (no se confirmó acceso exitoso ni compromiso de sistemas).
- El objetivo principal es el **dominio central (DC-01)**, componente crítico para la gestión de autenticación en la red.

---

#### 3. Evaluación de riesgos
- **Severidad**: Media
**Justificación**: Los intentos fallaron, por lo que no hay compromiso actual. Sin embargo, la IP externa `203.0.113.74` continuó intentando acceso durante 10 minutos (desde 08:26:16 hasta 08:27:13), lo que indica un ataque activo y potencial de escalada. Si no se bloquea, el atacante podría explotar una cuenta válida en un futuro intento.
- **Impacto potencial**: Compromiso del dominio (DC-01), lo que permitiría movilidad lateral en la red, acceso a datos críticos y alteración de servicios.
- **Nivel de confianza**: Alto (90%)
**Justificación**: La consistencia en la IP externa y el patrón de intentos (múltiples en 10 minutos) confirma la amenaza sin suposiciones adicionales.

---

#### 4. Recomendaciones priorizadas
1. **Bloquear inmediatamente la IP externa `203.0.113.74`** en firewalls y sistemas de seguridad para evitar futuros intentos.
2. **Revisar cuentas de administración** (`CORP\jlopez`, `CORP\slopez`, `CORP\backupsvc`) para identificar credenciales débiles o acceso no autorizado.
3. **Implementar limitación de intentos RDP** (ej.: 5 intentos fallidos en 10 minutos = bloqueo temporal).
4. **Monitorear activamente el DC-01** para detectar intentos adicionales y activar protocolos de respuesta ante nuevas amenazas.

**Justificación**: Estas acciones reducen el riesgo de compromiso del dominio sin afectar la operatividad normal.

---

#### 5. Conclusión
No se ha confirmado compromiso de sistemas o datos. Los intentos de fuerza bruta detectados son **fallidos**, pero representan un riesgo activo de alto potencial si no se mitigan. La prioridad es bloquear la IP externa y reforzar las políticas de autenticación RDP para evitar futuras brechas. Se recomienda monitorear la actividad durante las próximas 24 horas para garantizar la seguridad del dominio central.

**Nota**: El análisis se basa exclusivamente en los logs ampliados proporcionados; no se han realizado suposiciones adicionales sobre la existencia de compromisos.

---
*Preparado por el equipo de seguridad. Última actualización: [Fecha]*
